

Announcing the Winner of TTP LabTech's

"Win a mosquito[®] HTS competition"

1st July 2011

TTP LabTech is pleased to announce that the winner of a year's free fully supported use of its mosquito[®] HTS are Dr's Phillip Gribbon, Sheraz Gul and Ole Pless from the European ScreeningPort (ESP), Hamburg.

These scientists were awarded this unique opportunity for their novel proposal on how they would incorporate a mosquito[®] HTS into ESP's translational research and biomarker facility for the identification of novel targets that characterise neurological diseases with a focus on Multiple Sclerosis (MS).

The inclusion of a mosquito[®] HTS in this unit will enable them to accurately handle low volumes of valuable MS patient samples for high throughput analysis allowing for the discovery and characterisation of novel biomarkers that define different stages of MS. On receiving this award, Dr Gul commented "This instrument will enable us to rapidly automate biomarker discovery and efficiently use the precious patient material we have access to within our biomarker platform".

TTP LabTech's Commercial Director, Dr Jas Sanghera, on presenting this award, commented that the nature of this research proposal was ideally suited to the liquid handling abilities of the mosquito[®] HTS. Its precise pipetting of even difficult to handle liquids, using disposable tips which limits cross contamination enables easy assay miniaturisation on a nanoliter scale. In addition, its rapid dispensing capabilities makes it ideal for high through put screening assays of biomarkers and drug sensitivities of valuable patient samples.
